WITH UV DYE

STOP LEAK

by **blue seal** 

ZERO-POLYMER FORMULA

BlueSeal® is a multifunctional A/C sealant that utilizes an advanced non-polymer technology able to **SAFELY SEAL** common air conditioning leaks. A bond is formed, creating a permanent seal, when BlueSeal® and oxygen are combined. Controlled lab testing results show that BlueSeal® is +95% effective-rate in systems losing less than 25 oz. annually.

+ SEALANT

With years of proven results, BlueSeal® is effective on all common A/C leaks including Evaporator Cores, Condensers, Rubber Hoses, Gaskets & O-Rings. BlueSeal® also acts as an effective conditioner for dried and agging rubber.

+ PREVENTS

BlueSeal® helps prevent future leaks by creating additional bonds when new air is introduced into the system. It detects a potential leak and stops it before it's even noticed.

+ UV DYE

BlueSeal® contains a professional grade UV Dye creating visibility at the leak point for a certified mechanic if in the rare case that BlueSeal® is unable to stop the leak or that the leak point is too large to be fixed using a sealant.

-  **PRO APPROVED**
-  **DIY TRUSTED**

for **R-134a** systems

PRODUCT #	DESCRIPTION	MSRP*
BSSL125a	1.25 oz Bottle (R-134a)	\$ 14.99
